

OE23D22 REIMAGINING WATER IN CARTOGRAPHY

INSTRUCTOR

S GAUTHAM RATNA KUMAR

Gautham is an Architect & Industrial Designer based out of Hyderabad. Apart from his professional endeavors, his interests include studying and documenting cities' historical evolutions and mapping their timelines with corresponding political and cultural developments to understand them better.

OVERVIEW

Traditional cartographic representations have portrayed water in static forms, limiting it from contextual, temporal, and sensory dimensions. This elective seeks to broaden this perspective by delving into diverse facets of water in cartography. It will examine historical visual maps and media, and participants will embark on field visits centred around water-related areas. By translating their observations and experiences into creative outcomes, attendees aim to develop innovative visual media, providing a more holistic and nuanced comprehension of water.

This workshop serves as a platform to break free from conventional cartographic boundaries, exploring water's multifaceted nature in an immersive and dynamic manner.

KEY WORDS

Cartography, Water perception, Mapping and Visualization
